## Introduction

L'AREA is a web and mobile application. This application lets you choose a reaction, like “receive notification”, in a list of available reactions. This list is made according to certain action, like “have received an email” from a platform like Gmail for example. To do this, you will first need to connect you to the platforms in question (YouTube; Facebook; Google; another). The web and mobile application are linked, so all your information will be identical from one to the other.

## Prerequisites for using the web & mobile application

To use the AREA application, you will need an email address. You will need to have access to at least 2 platforms available on our application. (See list of AREA platforms)

## Registration / login

If it's your first time on the AREA application, you need to create your profile. All you need to do is enter your email, first and last name. You will also be asked to create a password to secure your profile.

**Create** your account

Firstname Lastname
